

The V International Conference

"DUSTY PLASMAS IN APPLICATIONS"

Odesa, Ukraine, 25–30 August, 2017.

Dear Colleagues,

We are pleased to announce that the V International Conference "DUSTY PLASMAS IN APPLICATIONS" will be held in Odesa on the 25-30 August 2017. Please see the Website <http://dpa.onu.edu.ua> for further details.

Chairmen: Academician A.G. Zagorodny (Ukraine),

Topic of the conference is the following: general theory and numerical simulation of complex plasmas, structures in dusty plasmas, combustion products plasmas (smoky plasmas), methods for dusty plasma diagnostics, microgravity experiments, dusty plasmas in technological applications, dust in fusion.

The meeting will take place in resort part of Odesa at the Odesa I.I. Mechnikov National University. Odesa is the largest industrial and scientific center of Ukraine on the Black sea. The Odesa University was founded in 1865 and now it is one of largest educational and scientific center of Ukraine. The physics of disperse systems and plasmas of combustion products are traditionally researched in the University. The preceding SU conferences on Low Temperature Plasma with Condensed Disperse Phase took place in Odesa in 1981, 1985 and 1988. Over 120 scientists from USSR have been participating in each of these conferences. The International Conferences on Dusty plasmas in applications were held in Odesa (2004, 2007, 2010, 2013).

More in the next announcement.

We hope to see you in Odesa.

Chairman of the Local Committee
Prof. Grygorii Dragan.
