PREFACE

The traditional WDS Proceedings in your hands is composed of the contributions which have been presented during the **26th Annual Conference of Doctoral Students** that was held in Prague, at Charles University, Faculty of Mathematics and Physics from June 6 to 8, 2017. The Proceedings is limited to physical study branches and it is compiled from 22 student manuscripts finally accepted for publication (5 contributions were not accepted).

As usual, all manuscripts were reviewed by two referees. We believe that it helps students to learn how to prepare the written presentation of their results in a foreign language and how to respond the referee's notices. They should take into account their comments and prepare a new submission including letters to both referees where they explain their reaction. This is a standard publication procedure in scientific journals and we are offering an exercise that would be useful for students in future. Since one of referees is a doctoral student, he/she can practise the preparation of a review. Moreover, the subject of the paper under review is often slightly different from his/her field of research, thus the student's referees should investigate new problems and another style of writing. They can see that a good and comprehensive review is sometimes a very difficult task. Therefore, a level of student's reports is often very different — from a formal review only to precise reports with a number of comments and suggestions.

The second referee is selected from the experienced senior researchers and, in this year, their list includes even 20 % of foreign experts. We would like to express many thanks to them for the understanding and great help. Their effort significantly contributed to a traditionally good quality of the Proceedings and you can find 296 citations to previous volumes in Web of Science and this number increases every year.

Editors thank to following referees:
